

Elcometer 119 Pipe Pit Gauge

The Elcometer 119 Pipe Pit Gauge is a small pocket-sized gauge designed to identify the condition of a pipe.

The gauge is placed horizontally on the surface of the pipe and the stylus is positioned into the base of the corrosion pit.

The gauge shows the pit depth compared with the actual pipe wall thickness. It is essential importance to pipe coaters, enabling them to make a quick assessment of the condition of pipework.

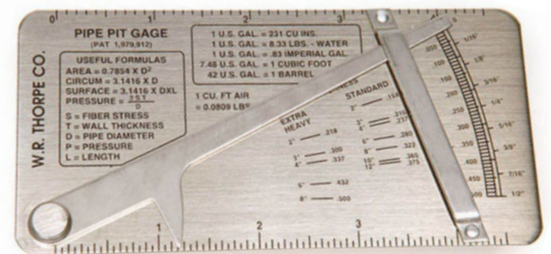

Imperial units only.

Test Method

The Elcometer 119 Pipe Pit Gauge is placed on the edge along the pipe and the indicator arm is depressed until the stylus touches the bottom of the pit or crater. The depth of the pit is then indicated on the scale marked on the body of the gauge. This can be compared with the nominal wall thickness of the pipe. Data printed on the body of the gauge includes a 0 – 4.5-inch ruler, weight per foot and formulae which are likely to be of use to the pipe coater.

Technical Specifications

Part Number	Description
E119-----	Elcometer 119 Pipe Pit Gauge
Range	0 - 0,5"
Graduation	10mils and 1/16"
Dimensions	68 x 133 x 4mm
Weight	227g

Packing List

Elcometer 119 Pipe Pit Gauge
Leather Wallet
