Thank you for your purchase of this Elcometer Viscosity Dip Cup. Welcome to Elcometer.

Elcometer are world leaders in the design, manufacture and supply of inspection equipment for coatings and concrete. Our products cover all aspects of coating inspection, from development through application to post application inspection.

This Elcometer Viscosity Dip Cup is a world beating product. With the purchase of this Viscosity Dip Cup you now have access to the worldwide service and support network of Elcometer. For more information visit our website at www.elcometer.com

1 ABOUT YOUR VISCOSITY DIP CUP

Elcometer Viscosity Dip Cups are easy-to-use gauges for rapid measurement of viscosity of liquids.

The cup is held by its handle and is dipped into the liquid to be measured. The cup is removed from the liquid and the time taken for the liquid to drain through an orifice in the bottom of the cup is measured.

The measured kinematic viscosity is generally expressed in seconds (s) flow time, which can be converted to Centistokes (cSt). A wide range of cups with different orifices is available for measurements between 2 cSt and 1840 cSt.

1.1 THESE INSTRUCTIONS

These instructions describe the operation of the following Elcometer Viscosity Dip Cups:

Elcometer 2210: Zahn

Elcometer 2215: Lory LCH

Elcometer 2310: Shell

Elcometer 2434/5/6/7: Frikmar

1.2 STANDARDS

The Elcometer Viscosity Dip Cups can be used in accordance with a wide range of National and International Standards.

For full details of which standards are appropriate see “Elcometer viscosity dip cups” on page 10.

1.3 WHAT THE BOX CONTAINS

- Elcometer Viscosity Dip Cup with handle
- Operating instructions
- Storage case

The Elcometer Viscosity Dip Cup is packed in a cardboard and foam package. Please ensure that this packaging is disposed of in an environmentally sensitive manner. Consult your local Environmental Authority for further guidance.

1.4 CAUTION

Take care to avoid damaging your viscosity dip cup. Damage to the orifice, scratches on the internal surface or deformation of the cup will affect the readings and the gauge may have to be replaced.

2 TAKING A READING

2.1 BEFORE YOU START

- Select a cup which gives a flow time of between 30 seconds and 100 seconds.
- Ensure the handle, the cup and the orifice are clean and free of debris, etc.
- The liquid being tested must be homogeneous and must not contain any bubbles.
- Measure and record the temperature of the liquid.

2.2 PROCEDURE

1. Immerse the cup completely into the liquid and twist several times to dislodge any bubbles which may be clinging to the internal surface of the cup (Figure 1, A).
2. Stir the liquid gently to ensure uniform temperature and density.
3. Leave the cup in the liquid for 1 to 5 minutes: For a Zahn cup (which has a low mass) 1 minute will be sufficient; for cups with higher mass, 5 minutes will be better.
4. Lift the cup vertically out of the liquid (Figure 1, B) and start the stopwatch the moment the top of the cup breaks the surface of the liquid.
5. Watch the flow of liquid from the orifice and stop the stopwatch the moment the flow breaks.

Figure 1. Using the Viscosity Dip Cup

When using a **Lory LCH Viscosity Dip Cup (Elcometer 2215)**, observe the surface of the liquid and stop the stopwatch the moment the top of the spindle appears.

2.3 AFTER THE TEST

Clean the gauge and all equipment.

Do not use wire brushes, metal scrapers, metal files or other metallic tools for cleaning.

Clean the gauge and all equipment using a suitable solvent only.

After cleaning, ensure that all materials are removed and that the instrument is dry.

3 CONVERTING TO VISCOSITY

The measured kinematic viscosity is expressed generally in seconds (s) flow time, which can be converted to Centistokes (cSt).

To convert from flow time (s) to kinematic viscosity (cSt), use the Elcometer 2400 Viscosity Disc - see "Related equipment" on page 12.

Alternatively, use the following formula:

$$V = K(t - c)$$

where

V = kinematic viscosity in cSt (mm²/s)

t = flow time in seconds

**Viscosity
Disc**

K and c are constants given in the following table:

Cup	K	c
Zahn Cup 1 ^a	1.1	29
Zahn Cup 2 ^a	3.5	14
Zahn Cup 3 ^a	11.7	7.5
Zahn Cup 4 ^a	14.8	5
Zahn Cup 5 ^a	23	0

Cup	K	c
Shell Cup 1	0.226	13
Shell Cup 2	0.576	5
Shell Cup 2½	0.925	3
Shell Cup 3	1.51	2
Shell Cup 3½	2.17	1.5
Shell Cup 4	3.45	1
Shell Cup 5	6.5	1
Shell Cup 6	16.2	0.5

- a. The constants are given in Patton, T. C., Paint Flow and Pigment Dispersion, second edition, John Wiley & Sons, New York, 1979, page 82.

Please note:

- The formula treats the cups as linear, which they are not.
- The formula is effective for flow times between 20 seconds and 80 seconds^a.

-
- a. Zahn Cup 1 - formula is effective between 35 seconds and 80 seconds.

4 STORAGE

Always store the gauge in its case when it is not being used.

5 MAINTENANCE

Elcometer Viscosity Dip Cups are designed to give many years reliable service under normal operating and storage conditions.

Regular calibration checks over the life of the gauge are a requirement of quality management procedures e.g. ISO 9000 and other standards.

To check for wear, use Elcometer 2410 Viscosity Standard Oils^b and measure the drain time. If wear is detected, contact Elcometer or your local Elcometer supplier.

Details of Elcometer offices around the world are given on the outside cover of these Operating Instructions. Alternatively visit the Elcometer website, www.elcometer.com

b. See “Elcometer 2434/5/6/7 Frikmar: Anodised Aluminium” on page 8 for ordering information.

6 ACCESSORIES

Calibration certificate

Elcometer Viscosity Dip Cups are supplied with a Batch Calibration Certificate^c as standard. Individual Calibration Certificates are available^c but must be requested at the time of order as they can not be issued retrospectively.

10 RELATED EQUIPMENT

In addition to Viscosity Dip Cups, Elcometer produces a wide range of other equipment for measuring the physical characteristics of surface coatings.

Users of the Elcometer Viscosity Dip Cups may also benefit from the following Elcometer products:

- Elcometer 2410 Viscosity Standard Oils for Calibration
- Elcometer 2400 Viscosity Disc
- Elcometer 7300 Digital Stopwatch
- Elcometer 212/213 Digital Thermometer

For further information contact Elcometer, your local supplier, or visit our website at www.elcometer.com
